

TODDY® COLD BREW SYSTEM

Toddy® Cold Brew Cupping Kit

Introducing the Toddy® Cold Brew Cupping Kit, the industry's first cold brew evaluation solution designed to brew small batch sizes for comparative sensory analysis. By enabling side-by-side sample comparisons, the smaller brewing vessels facilitate accurate tasting techniques while minimizing the potential waste sometimes associated with onboarding a cold brew program.

When used in conjunction with the Toddy® Cold Brew Cupping Protocol and Cupping Form, the kit simplifies the method of cold brew cupping, controlling other variables to put the focus on the flavor profiles.

- With the set of three, you can efficiently dial in your flavor profiles – without producing full commercial batches.
- The brewing vessel is made from high-quality borosilicate glass.
- All metal parts are constructed from brewer's grade (304/CF8) stainless steel.

Includes 12 paper filters and 12 tree free filters.

Available in a single kit or set of three.

Items: TCK1 (single), TCK3 (set of three)

SPECS:

- **In the kit (single):** Brewing vessel, lid, filter basket, set of tongs, and 24 single-use filters.
- **In the kit (set of three):** 3 brewing vessels and lids, 3 filter baskets, set of tongs, and 24 single-use filters.
- **Materials:** Glass vessel, stainless steel, silicone, and paper and polylactic acid (PLA) filters.
